

help me create a simple step by step home page about me for my web and cloud development class

Here is a clean, simple, step-by-step guide to building a modern "About Me" home page using standard HTML and CSS.

Step 1: Set Up Your Project Folder & Files

1. Create a new folder on your computer named `about-me-page`.
2. Inside that folder, create two files:
 1. `index.html` (the page structure)
 2. `styles.css` (the page styling)

Step 2: Build the HTML Structure (`index.html`)

Open `index.html` in your code editor (like VS Code) and paste the following HTML structure:

HTML

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>About Me | My Web & Cloud Project</title>
  <link rel="stylesheet" href="styles.css">
</head>
<body>

  <!-- Header / Hero Section -->
  <header class="hero">
    <div class="container">
      <h1>Hello, I'm <span class="highlight">[Your Name]</span></h1>
      <p class="subtitle">Student & Aspiring Developer</p>
    </div>
  </header>
```

```
<!-- Main Content -->
<main class="container">

  <!-- About Section -->
  <section class="card">
    <h2>About Me</h2>
    <p>
      Welcome to my home page! I am currently studying <strong>Web and Cloud Development</strong>.
      I enjoy building web applications, learning about modern software architecture, and exploring
      the latest in cloud computing technologies.
    </p>
  </section>

  <!-- Technical Skills Section -->
  <section class="card">
    <h2>Technical Focus</h2>
    <ul class="skills-list">
      <li>HTML & CSS</li>
      <li>JavaScript</li>
      <li>PHP & Databases</li>
      <li>Linux & System Admin</li>
      <li>Cloud Concepts</li>
    </ul>
  </section>

  <!-- Current Projects Section -->
  <section class="card">
    <h2>Featured Projects</h2>
    <div class="project-grid">
      <div class="project-item">
        <h3>Web Development Projects</h3>
        <p>Frontend and backend web applications built during coursework</p>
      </div>
      <div class="project-item">
        <h3>Cloud & Server Labs</h3>
        <p>Configuring and managing Linux environments, local server stacks, and cloud services</p>
      </div>
    </div>
  </section>

</main>

<!-- Footer -->
<footer>
  <div class="container">
    <p>&copy; 2026 [Your Name] | Built for Web & Cloud Development</p>
  </div>
</footer>
```

```
</body>
</html>
```

Step 3: Add the CSS Styling (`styles.css`)

Open `styles.css` and paste the following code to give your page a clean, responsive design:

CSS

```
/* Reset & Base Styles */
* {
  margin: 0;
  padding: 0;
  box-sizing: border-box;
}

body {
  font-family: 'Segoe UI', Tahoma, Geneva, Verdana, sans-serif;
  line-height: 1.6;
  color: #333;
  background-color: #f4f7f6;
}

.container {
  max-width: 800px;
  margin: 0 auto;
  padding: 0 20px;
}

/* Hero Header */
.hero {
  background-color: #1e293b;
  color: #ffffff;
  text-align: center;
  padding: 3rem 1rem;
  margin-bottom: 2rem;
}

.hero h1 {
  font-size: 2.5rem;
  margin-bottom: 0.5rem;
}

.hero .highlight {
```

```
    color: #38bdf8;
}

.subtitle {
    font-size: 1.2rem;
    color: #94a3b8;
}

/* Main Cards */
.card {
    background: #ffffff;
    padding: 1.5rem;
    border-radius: 8px;
    margin-bottom: 1.5rem;
    box-shadow: 0 4px 6px rgba(0, 0, 0, 0.05);
}

.card h2 {
    color: #0f172a;
    border-bottom: 2px solid #e2e8f0;
    padding-bottom: 0.5rem;
    margin-bottom: 1rem;
}

/* Skills Pill List */
.skills-list {
    list-style: none;
    display: flex;
    flex-wrap: wrap;
    gap: 10px;
}

.skills-list li {
    background: #e0f2fe;
    color: #0369a1;
    padding: 8px 14px;
    border-radius: 20px;
    font-weight: 600;
    font-size: 0.9rem;
}

/* Project Grid */
.project-grid {
    display: grid;
    grid-template-columns: repeat(auto-fit, minmax(250px, 1fr));
    gap: 15px;
}

.project-item {
```

```

    background: #f8fafc;
    border: 1px solid #e2e8f0;
    padding: 1rem;
    border-radius: 6px;
  }

.project-item h3 {
  margin-bottom: 0.5rem;
  color: #1e293b;
}

/* Footer */
footer {
  text-align: center;
  padding: 2rem 0;
  color: #64748b;
  font-size: 0.9rem;
}

```

Step 4: Preview and Customize

1. Open `index.html` in any web browser to test it.
2. Replace `[Your Name]` with your actual name.
3. Add links to your GitHub or class project repositories if required by your assignment.

Step 5: (Optional) Prepare for Cloud Deployment

If your class requires deploying this page to a cloud provider or platform later (like GitHub Pages, Vercel, Netlify, or an AWS/GCP VM):

- Make sure your primary HTML file is strictly named `index.html` (case-sensitive), as cloud web servers look for `index.html` as the default root entry point.

my css is not working i will also share my html

```
<html>
<head>
  <body>
```

The main reason your CSS is not working is that **you haven't linked your CSS file inside your HTML file**, along with a couple of structural mistakes in your HTML tags.

Key Issues to Fix

1. **Missing CSS Link:** You need to add `<link rel="stylesheet" href="index.css">` inside the `<head>` tag so your HTML knows to load your stylesheet.
2. **Incorrect File Name:** In your code editor screenshot, your stylesheet is named `index.css` (rather than `styles.css`), so your `<link>` tag needs to match `index.css`.
3. **Misplaced `<head>` and `<body>` Tags:** Your entire page content (and `<footer>`) is placed inside the `<head>` tag. The `<head>` tag is only meant for metadata/links, while `<body>` holds the actual visible content.

Fixed HTML Structure

Replace your HTML code with this cleaned-up version:

HTML

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Landing Page</title>
  <!-- Link your CSS file here -->
  <link rel="stylesheet" href="index.css">
</head>
<body>

  <!-- Header -->
  <header class="hero">
    <div class="container">
```

for hobbies, lets add css styling

Here is how to add CSS styling specifically for your **Hobbies** section.

You can add this block to the bottom of your `index.css` file:

CSS

```
/* Hobbies Section Styling */
.hobbies-list {
  list-style: none; /* Removes standard bullet points */
  padding: 0;
  display: flex;
  flex-direction: column;
  gap: 10px;
}

.hobbies-list li {
  background-color: #f1f5f9;
  color: #334155;
  padding: 10px 16px;
  border-left: 4px solid #38bdf8; /* Adds a colorful accent bar on the left */
  border-radius: 4px;
  font-weight: 500;
}
```

What this CSS does:

- `list-style: none;` : Removes the default bullet points for a cleaner, modern look.
- `display: flex` & `gap: 10px` : Evenly spaces out your hobby items vertically.
- `border-left: 4px solid #38bdf8;` : Adds a sleek blue highlight bar to the left of each hobby card.
- `padding` & `border-radius` : Gives each item a rounded, box-like appearance that matches the rest of your card layout.

how would i add a dropdown to each hobby to provide more information?

The simplest way to add an expandable dropdown (accordion) for each hobby without needing JavaScript is by using the native HTML `<details>` and `<summary>` tags.

Step 1: Update Your HTML Structure

Replace your existing Hobbies `<section>` in `index.html` with this updated structure:

HTML

```
<!-- Hobbies Section -->
<section class="card">
  <h2>Hobbies</h2>
  <div class="hobbies-list">

    <details class="hobby-item">
      <summary>Playing Video Games</summary>
      <p>I enjoy immersive single-player RPGs and tactical multiplayer games. I
    </details>

    <details class="hobby-item">
      <summary>Driving</summary>
      <p>Love going on scenic road trips and exploring new routes across Ireland
    </details>

    <details class="hobby-item">
      <summary>Researching New and Old Technologies</summary>
      <p>Fascinated by legacy hardware, system administration trends, and cloud
    </details>

  </div>
</section>
```

Step 2: Add CSS for the Dropdowns

Add these styles to the bottom of `index.css` to make the dropdowns look sleek and clickable:

CSS

```
/* Interactive Hobby Dropdowns */
.hobbies-list {
  display: flex;
  flex-direction: column;
  gap: 12px;
}

.hobby-item {
  background-color: #f8fafc;
  border: 1px solid #e2e8f0;
  border-left: 4px solid #38bdf8; /* Blue highlight bar */
  border-radius: 6px;
  overflow: hidden;
  transition: background-color 0.2s ease;
}

/* Header/Clickable Title */
.hobby-item summary {
  padding: 12px 16px;
  font-weight: 600;
  color: #1e293b;
  cursor: pointer;
  list-style: none; /* Removes default arrow in some browsers */
  display: flex;
  justify-content: space-between;
  align-items: center;
}

/* Custom indicator arrow */
.hobby-item summary::after {
  content: '▶';
  font-size: 0.75rem;
  color: #64748b;
  transition: transform 0.2s ease;
}

/* Rotate arrow when opened */
.hobby-item[open] summary::after {
  transform: rotate(90deg);
}

/* Revealed text content */
.hobby-item p {
  padding: 0 16px 14px 16px;
  margin-top: 4px;
  color: #475569;
}
```

```
font-size: 0.95rem;
line-height: 1.5;
}
```

How it works:

- `<details>` & `<summary>` : `<summary>` acts as the clickable title, and any content below it inside `<details>` automatically expands or collapses on click.
- `[open]` **selector**: Changes the background or rotates the arrow icon automatically when the user toggles the element open.

```
/* Reset & Base Styles */
* {
  margin: 0;
  padding: 0;
```

The issue on GitHub Pages is almost certainly caused by **duplicate CSS rules overriding each other** or **cached files in your browser**.

Here are the specific reasons and how to fix them:

1. Duplicate Rule Override (The main CSS bug)

In your CSS file, you have defined `.hobbies-list` twice:

- The first version treats `.hobbies-list` as an unordered list element (`<ul>`) targeting `li` children:

CSS

```
.hobbies-list li { ... }
```

- The second version right below it targets interactive dropdown elements:

CSS

```
.hobby-item { ... }
```

If your HTML on GitHub Pages still uses `<ul>` and `<li>` tags instead of `<details>` and `<summary>`, the second set of CSS styles (`.hobby-item`) won't apply to anything, but the duplicate `.hobbies-list` rules might conflict.

2. How to Clean Up Your `index.css`

Remove the old `.hobbies-list li` block completely so your CSS isn't fighting itself. Replace the bottom section of your CSS file with this consolidated version:

CSS

```
/* Interactive Hobby Dropdowns */
.hobbies-list {
  display: flex;
  flex-direction: column;
  gap: 12px;
}

.hobby-item {
  background-color: #f8fafc;
  border: 1px solid #e2e8f0;
  border-left: 4px solid #38bdf8;
  border-radius: 6px;
  overflow: hidden;
  transition: background-color 0.2s ease;
}

.hobby-item summary {
  padding: 12px 16px;
  font-weight: 600;
  color: #1e293b;
  cursor: pointer;
  list-style: none;
  display: flex;
  justify-content: space-between;
  align-items: center;
}

.hobby-item summary::-webkit-details-marker {
```

```

display: none; /* Hides default Chrome/Safari arrow */
}

.hobby-item summary::after {
  content: '▶';
  font-size: 0.75rem;
  color: #64748b;
  transition: transform 0.2s ease;
}

.hobby-item[open] summary::after {
  transform: rotate(90deg);
}

.hobby-item p {
  padding: 0 16px 14px 16px;
  margin-top: 4px;
  color: #475569;
  font-size: 0.95rem;
  line-height: 1.5;
}

```

3. Checklist for GitHub Pages

If it works locally in VS Code but not on GitHub Pages:

- **Uncommitted HTML Changes:** Make sure you saved, committed, and pushed the updated `index.html` file (containing `<details>` and `<summary>`) to GitHub, not just `index.css` .
- **Browser Caching:** Browsers heavily cache CSS files from live URLs. Open your GitHub Pages link and press **Ctrl + F5** (or **Cmd + Shift + R** on Mac) to force a hard refresh.
- **File Naming Case-Sensitivity:** Ensure your stylesheet is named exact lowercase `index.css` both in your file explorer and in your `<link rel="stylesheet" href="index.css">` tag. GitHub Pages runs on Linux servers, which are case-sensitive (`Index.css` $\neq$ `index.css`).
